Norma Plus float-valve for exposed cisterns

DESCRIPTION

NORMA-PLUS is the float-valve designed and manufactured by Kariba®. Thanks to Kariball patented technology, which exploits the mechanical potential of a sphere and the physical characteristics of water, NORMA-PLUS is an extremely silent solution.

The action of the grooves of the sphere, together with the filter, favor the “diffusion” effect of the water, drastically reducing its noise.

NORMA-PLUS is approved in acoustic class 1 by the prestigious German organization LGA – TUV.

TECHNICAL NOTES

- Patented KARIBALL technology: allows the water to be evenly distributed while reducing noise and helping to filter out residue
- High-quality raw materials: enable functionality and durability
- Brass fittings: guarantee excellent performance during installation and maintenance
- Guaranteed, consistent performance: the mechanical operating system guarantees optimal performance even with high or extremely low mains pressures

COMPATIBILITY

All Kariba exposed flush cistern.

MODELS

CODE		DESCRIPTION
	300335	Float-valve Norma-Plus 1/2"
	300336	Float-valve Norma-Plus 3/8"
	300336C	Float-valve Norma-Plus 3/8" for ceramic cisterns
	300082	Plunger kit with pad seal and cap
	300083	Nozzle kit with o-ring
